

## 4 easy steps to opening a lock

Lock combination is 38-24-30

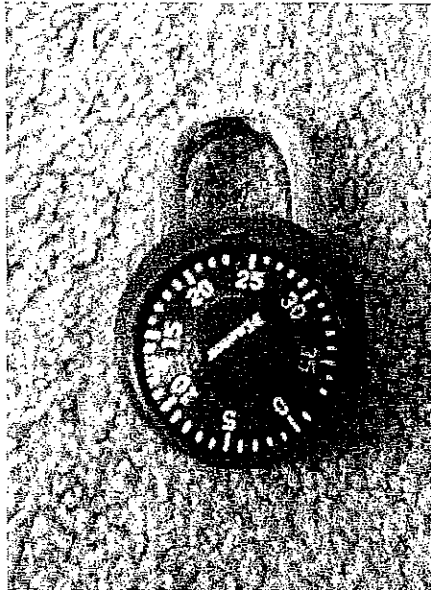

1) To clear the lock, turn the knob to the right 2 times and land on zero.

2) Turn the knob to the right once more and land on your first number. In this case it's 38.

3) Turn the knob to the left twice (go past zero) and land on your second number the second time. In this case it is number 24.

4) Turn the knob to the right and land on your third number. In this case it is 30. Pull on the lock and it should open.
