**Course Description:**

**Environmental Sciences 11**

Environmental Sciences 11 is an exploratory course that is meant to connect students to the local environment. In the age of climate change, inspiring a next generation of environmental stewards is of the utmost importance, and that is what Environmental Sciences 11 is all about! Students will first learn all about the characteristics of our local ecosystems, before learning about the ways that human actions impact the environment. Finally, students will learn about how we can act as environmental stewards to care for and protect the environment, contributing to a more sustainable future for all! This course is meant to be very hands-on and experiential, rooted in the real world. Students will connect with local environmental organizations, such as the North Shore Streamkeepers, the Pacific Science Enterprise Centre, Oceanwise, and more! Let's make the world a better place for all living things!
