

Calculus 12

Course Code: MCALC-12

Many universities suggest taking Calculus 12 for admission to math, science, business and engineering programs. Some universities require this course to be done in class, rather than on-line, to ensure that students master the course content. Classroom instruction additionally provides consistent feedback to produce not only correct solutions, but also those that are mathematically elegant.

Calculus 12 develops basic calculus concepts to help a student in college or university understand the language of future calculus courses. A student does not need to have completed Pre-Calculus 12 before taking this course. However, this is a challenging course and thus a student needs to participate in order to succeed.
