

Pre- Calculus 11

Course Code: MPREC-11

In our increasingly technological society, students require the ability to solve problems, understand and use mathematics, interpret the results, and explain their findings. Pre-Calculus 11 is a means of gaining these necessary skills. Students will explore reasoning, problem solving, communicating, and connecting mathematical concepts.

Many universities require Pre-Calculus 11 for admission to math, science, business, and engineering programs. Some universities require this course to be done in class, rather than on-line, to ensure that students master the course content. Classroom instruction additionally provides constant and consistent feedback to produce not only correct solutions, but those that are mathematically elegant.
